2025 SPRING / SUMMER

Access
the
inaccessible®

Access the inaccessible®

For over 50 years, Petzl has been putting superior tools and technical solutions in the hands of our users, so they can level up their performance and enjoy every moment spent doing what they love outdoors. Our know-how and expertise is unmatched. It allows our communities to have unique experiences, whether they're navigating alpine terrain, clipping bolts, exploring caves, or skiing powder; on rock or ice, running or climbing, by day or by night.

For 2025, we've once again poured all our energy into bringing new products to all those who share a passion for vertical pursuits and the outdoors. As always, we strive to be the go-to partner for every activity our customers pursue and every adventure they embark upon. What makes this possible is our products and the technical expertise we bring to everything we do — and we aren't stopping anytime soon!

Happy reading and have a great season!

We
are **PETZL.**

This is
how we **see the world.**

We are committed to **creating safer places.**

For those who **work and play**
in the vertical and dark worlds.

For those who want **to access**
their own inaccessible every day.

We are **independent** and completely
free to choose our own endeavors.

To maintain **industrial excellence**,
paying attention to our impact.

To be pioneers in the pursuit of
perpetual innovation.

Sharing, educating, building. **Together.**

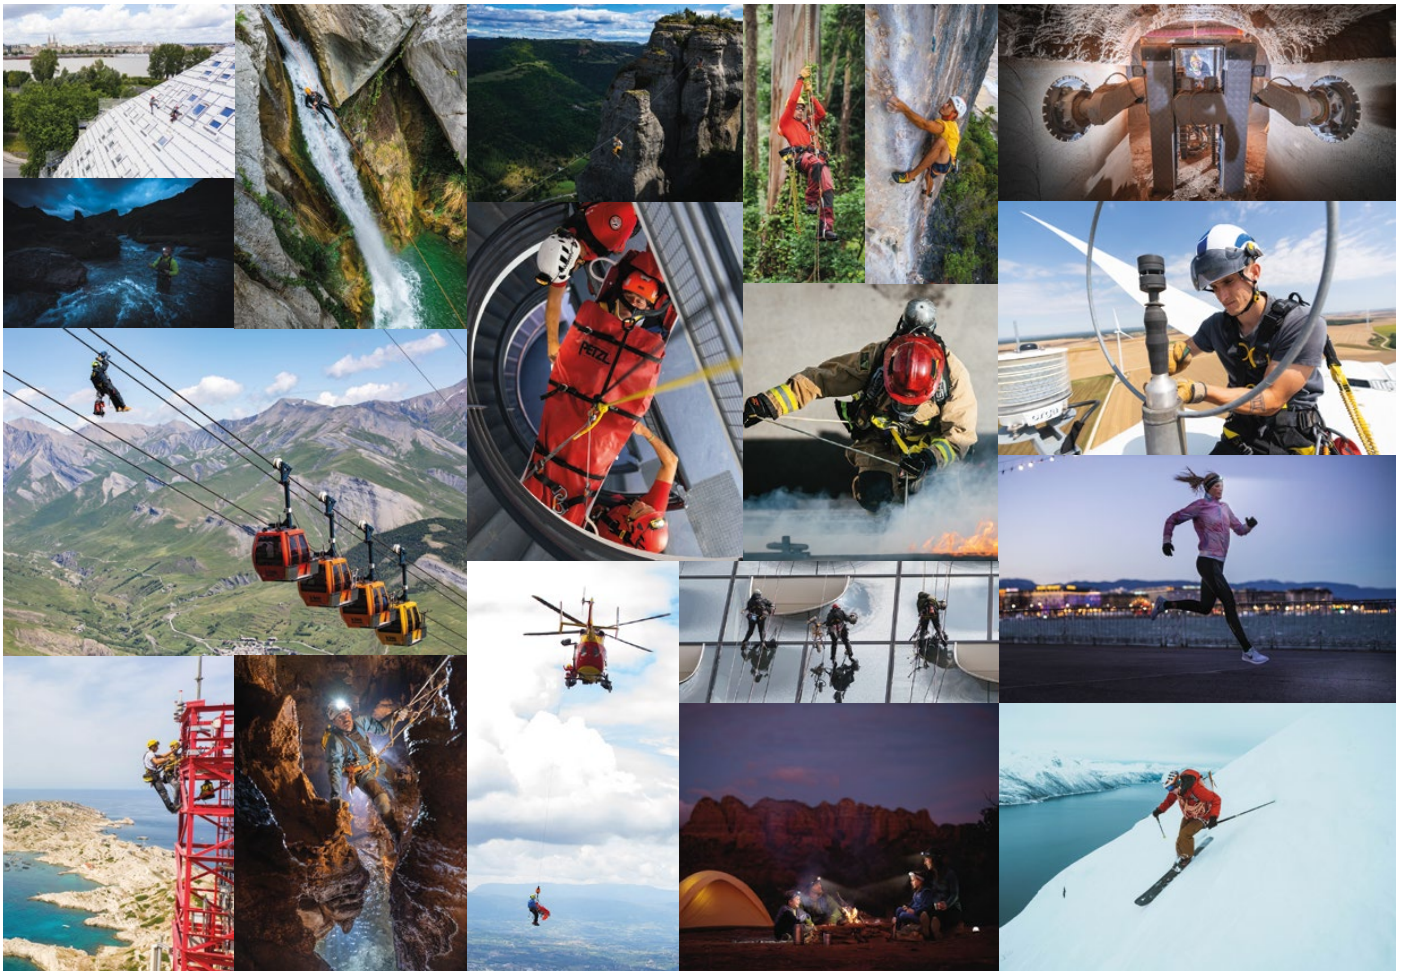

This is
how we **see the world.**

We
are **PETZL.**

Access the inaccessible[®]

“Accessing the inaccessible” is the driving force behind everything you do, whether you are moving towards a summit or descending into darkness. You’re determined to get to ever-greater heights and through ever-deeper shadows. And you’re always searching for better tools to do it: tools with superior performance, tools that are more reliable, tools so comfortable and ergonomic that they disappear into your hand. At Petzl, we share your determination. We’ve built our entire design and manufacturing philosophy around exceeding your needs in the field. It’s what we’ve been doing for 50 years, and what we’ll continue to do for years to come.

Petzl Across the Globe

Petzl is a family business that, over the years, has become the largest European manufacturer of personal protective equipment for those who work and play in darkness or at height. All of our products are invented and developed at our headquarters in the heart of the French Alps.

Key Stats

The brand is present in over **55** countries.

85 % of sales are made internationally.

More than **9** million products are sold every year.

10,000,000 people use Petzl personal protective equipment every day.

The Values That Motivate Us

For 50 years, Petzl has been built around four pillars, four fundamental values that motivate every decision we make: remaining a stable family business, encouraging innovation to imagine the best solutions, insisting on industrial excellence with the goal of zero defects, and remaining engaged with our communities by providing global best practices.

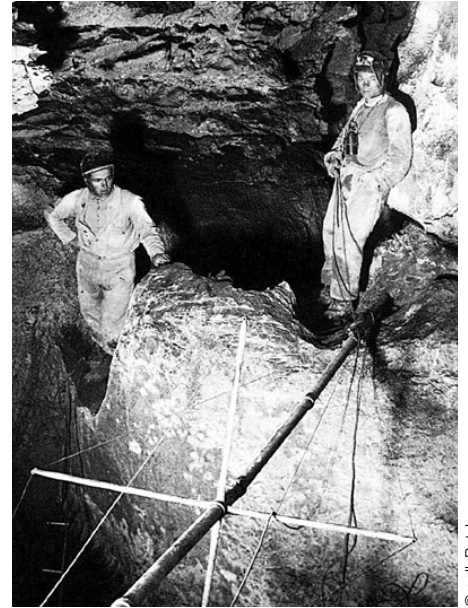

Learn more about each of our pillars.

1. Family Ownership

© 2023 - Petzl Distribution - Stéphane Candé

Sébastien, Paul, and Olivier Petzl

Fernand Petzl and Daniel Gagneur in front of a scaling pole

© coll. Petzl

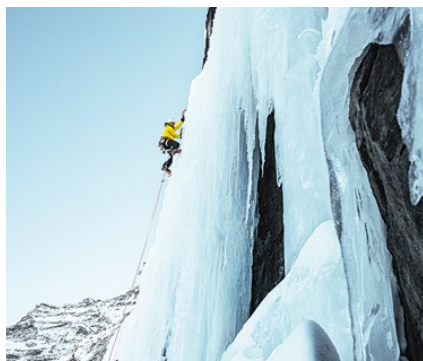

Fernand in his workshop

Our story begins in the 1930s in southeastern France

That was when craftsman Fernand Petzl was introduced to caving. Back at his workshop after each excursion to the depths, Fernand imagined new tools for exploring darkness and heights. In 1968, he marketed his first products; in 1970, Petzl was born.

For decades, the Petzl family has built a stable environment that fosters creative solutions and industrial excellence. The new generation is rooted in these principles and ready to make new discoveries.

The Petzl family business is not listed on the stock market. We're proud of our independence; we make our own choices, take responsibility for our decisions, and maintain a long-term, sustainable vision for the future. The confidence and satisfaction of our customers, our dealers, and our partners drives everything we do.

© 2021 - Petzl Distribution - Vuedici.org

■ 2. Innovative Spirit

© 2021 Petzl Distribution - Lafouche-CNEAS-CRFS Lammamezan

Innovations That Challenge Convention

With the introduction of the first headlamp in 1973, the legendary GRIGRI assisted blocking belay device in 1991, and the MAESTRO rescue descender in 2019, Petzl ingenuity has always pushed standard practices forward. Since the creation of Petzl in 1970, our objective has always been to make progressing in dark or vertical spaces safer and more comfortable.

Going Farther

As passionate pioneers, we delight in creating new opportunities for our users to venture into ever more committing terrain — to go farther and higher, to work more efficiently, to maximize safety and to make what was inaccessible today accessible tomorrow.

© 2019 - Petzl Distribution - James Rich

Simplicity, Durability, Efficiency

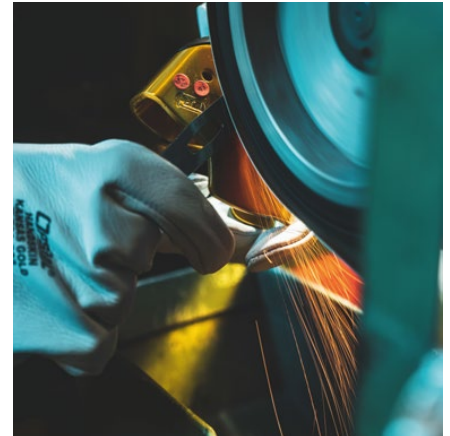

In every tool we design and construct, we prioritize simplicity, durability, and efficiency. For Petzl, being a pioneer has meant 50 years of passion, expertise, innovation, and continuous improvement. This approach to our craft and our business has allowed us to serve as a global expert, as we did in 2006 with the conception of the EXO personal escape system. At the request of, and in collaboration with, the firefighters of New York City, we were able to design an efficient solution that would allow easy escape in critical situations. It's an achievement that has been recognized with several awards, including best invention of the year by Time Magazine.

The Evolution of Petzl Headlamps

3. Industrial Excellence

© 2020 - Petzl Distribution - Stéphane Candé

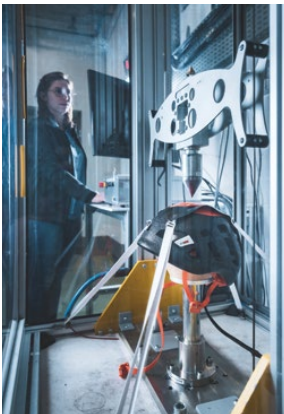

Beyond the Standards

We have a deep responsibility to the people who trust us with their lives, and we develop, test, and qualify all of our products above required standards. Our design center, based in France, integrates all crafts that are related to the creation of products: mechanical, textile, electronic, optical, and technological. From the design and prototype phases, the reliability of a product and the safety of the user are continuously evaluated, with particular attention to risks of use.

With labs dedicated to product testing, we conduct dynamic fall and impact resistance tests, perform cyclical testing, and evaluate performance, as well as beam quality and burn times of our headlamps. This process includes rigorous field testing in order to test the ergonomics and reliability during real-world use.

© 2023 - Petzl Distribution - Stéphane Candé

Zero Defects - PPE (Personal Protective Equipment)

Reliability is at the center of our concerns: our goal is for our products to consistently function at the same level of excellence. Our objective is to allow zero defective products to leave our facilities, which involves processes with significant extra costs at every stage of production.

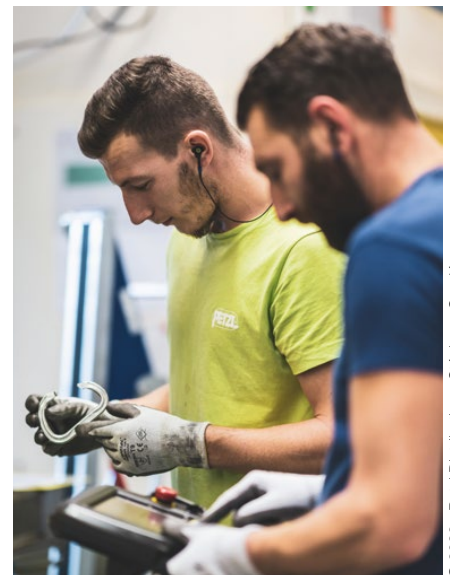

As we navigate an increasingly globalized economy, we go to great lengths to support our distributors and dealers, and we are heavily involved in the fight against counterfeit products.

Production and Inspection

Petzl's production sites are located in France, in the towns of Crolles, Eybens, and Rotherens, as well as in Rawang, Malaysia. Remaining competitive and keeping the majority of our production in France means that we continuously optimize our production lines and reduce our waste. This production infrastructure is complemented by long-term partnerships with key suppliers in Europe and Asia.

Our purchasing and quality control teams work closely with suppliers, ensuring to the best of our abilities, product reliability and quality that meets or exceeds our strict requirements. Quality inspection is present throughout every step of the production process: machine inspection of operations, human inspection at key points, further reinforcement by error-proofing systems and final individual inspection of each product.

We regularly audit the methods, quality management systems, and CSR practices (Corporate Social Responsibility) of our suppliers and strategic partners, especially when it comes to their employees.

© 2023 - Petzl Distribution - Stéphane Candé

■ 4. Community Engagement

© 2019 - Petzl Distribution - Julian Bückers

© 2018 - Petzl Distribution - Vuedici.org

Using Our Expertise to Serve Communities

Sharing technical knowledge and appropriate product uses is at the heart of what we do at Petzl. We produce high-quality technical content that is available to everyone and utilized by the different communities that we serve. With a focus on maximizing safety, this content is updated and enriched throughout the lifespan of our products to keep our customers informed and moving forward while they practice their sport or do their job.

International Collaboration

Across the world, we have partnerships with iconic athletes, influential figures, professionals who work in extreme conditions, NGOs, certifying bodies, and training centers operated by leading experts in the field. These collaborations help us co-create a world where we can all learn, share, and flourish. They also make it easier to promote best practices and standard uses. At the heart of our collaborations is always a passion for exploration, for a job well done, and for the pursuit of the inaccessible.

The Petzl Foundation is an integral part of Petzl.

Through the Petzl Foundation, we support and initiate projects that help prevent accidents, preserve the environment, and improve knowledge of the natural world around us.

More information about the Petzl Foundation can be found on page 140.

“More than ever before, we’re acutely aware that the choices we make today will have a lasting impact on the environment and will actively shape our own futures and the futures of our children.

We’re committed to using our creativity and our capacity to innovate in service of sustainably reducing our impact in a continuous drive for improvement.”

Sébastien Petzl, Director of CSR

© 2023 - Petzl Distribution - Marc Daviet

Our approach to CSR is pragmatic, collaborative and positive. It's built on concrete actions, feedback from our stakeholders, and is solution-oriented, to encourage our teams and community to take action.

The safety and satisfaction of our customers remains our top priority. Beyond that, we're striving to create a more sustainable future. Petzl has launched projects to improve our own economic, environmental, and social practices, as well as the practices of our suppliers in order to:

- Reduce our carbon intensity
- Reduce, reuse, and recycle our waste
- Improve our employee satisfaction
- Improve the labor conditions of our suppliers

Four Actionable Commitments

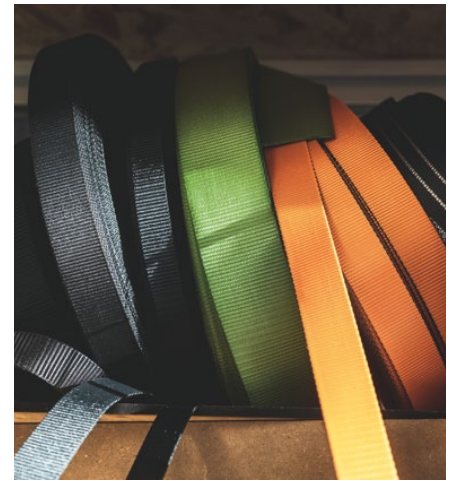

At Petzl, we're focused on four commitments that respond to the primary concerns of over 2,000 of our internal stakeholders (employees, subsidiaries, family shareholders) and external stakeholders (clients, users, suppliers, associations, and NGOs). We are manifesting these four commitments through hands-on projects with measurable outcomes.

■ Reduce Our Carbon Intensity

In 2020, we worked with Carbone 4 to measure the comprehensive carbon impact of our operations in 2019 — from the extraction of raw materials to the end of a product's life. Our footprint was equal to 45,000 metric tons of CO₂. Three areas accounted for 75 % of our emissions: raw materials (34 %), transport of goods (24 %), energy used to power our headlamps (17 %).

In 2021, we created initiatives to reduce our carbon footprint: prioritize the use of materials with the least impact, improve the durability and reparability of our products, shrink the distances our goods travel, and reduce our energy consumption.

By 2030, our goal is to reduce our total carbon footprint by 50 % per euro in sales.

© 2023 - Petzl Distribution - Stéphane Candé

■ Reduce, Reuse, and Recycle Our Waste

The waste from our industrial and commercial operations produces a variety of pollutants.

We're taking action in our factories, warehouses, and offices to reach three objectives by 2025:

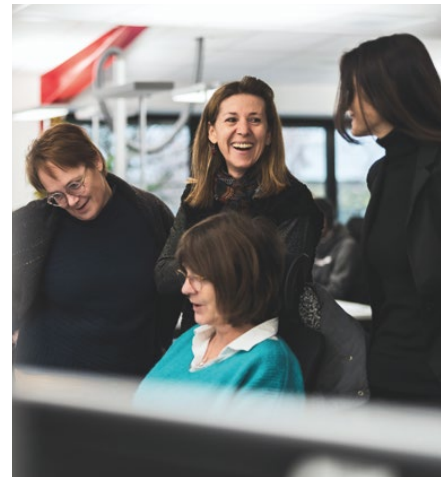

- Eliminate single-use plastics in our packaging and supply chain
- Reuse 50 % of our cardboard and pallets, recycle the rest
- Recycle 80 % of our metal, plastic, cardboard and wood waste, put the rest towards energy recovery

© 2023 - Petzl Distribution - Stéphane Candé

■ Improve Our Employee Satisfaction

Our strong and consistent growth, coupled with the complex issues of the pandemic, has the potential to affect employee health. In 2021, we evaluated the satisfaction of all Petzl employees in France using the Wittyfit platform. The survey covers topics including organization and work load, autonomy, work/life balance, recognition, as well as purpose and values. Using the results, we created action plans to improve satisfaction — some carried out by leadership and others co-created and led by the teams. In 2023, this satisfaction audit was extended to all Petzl employees on a global level.

© 2023 - Petzl Distribution - Stéphane Candé

■ Improve the Labor Conditions of Our Suppliers

Since 2010, our responsible purchasing initiative has aimed to ensure that all our suppliers comply with the Petzl code of conduct. This code aligns with International Labor Organization (ILO) directives: Our objectives are to improve social, environmental, health, and safety practices at all of our suppliers. We've created an annual evaluation of CSR practices for suppliers representing 80 % of our purchases. We've offered reinforced support for 25 % of our suppliers in their continued improvement plans. We are also collaborating with other manufacturers to combine our audit efforts and reaffirm our CSR standards for common suppliers.

Combinations for every experience — gear for every climber. Whether you're a beginner or a pro, climbing in the gym or at the cliff, Petzl offers complete gear solutions for every skill level.

Climbing and Mountaineering Combinations 2025

Finding the right solution for our users doesn't mean simply providing a good product. It means providing a complete solution that wholly meets their needs. That's why we make products that work together seamlessly to give our customers the best possible experience. Helmets, harnesses, belay devices, carabiners and quickdraws, ropes; every product range offers an important piece of gear for your climbing kit. Discover it all right here!

PERFORMANCE Gym and Rock Climbing

Climbers who are continuously pushing their performance to the next level want superior gear to get them there. They're always looking to update their kit with the best and latest equipment available. Often heavily involved in the climbing community, these climbers appreciate the recognition that comes with sporting PERFORMANCE products. They look for gear that is well-designed, innovative, lightweight, compact, and efficient, so they can clip the chains on their dream project. It's no coincidence that we use the same criteria to create our PERFORMANCE products.

PERFORMANCE Multi-Pitch Climbing

Multi-pitch climbing presents climbers with unique and seemingly endless challenges. When they're pushing their limit a thousand feet off the ground, trusting the gear takes on a whole new meaning. Success often requires total commitment to the goal. And sometimes the outcome boils down to just a few variables. Put all the odds in their favor with gear that is comfortable yet lightweight, and durable without ever compromising performance.

ADVANCED Gym and Rock Climbing

Seasoned climbers who are often already familiar with Petzl, these climbers are on the hunt for gear that meets their needs for progression and performance. The intrinsic quality of a product is just as important as its design or the image it conveys in the world of climbing. Inspired by the leaders in our sport, these climbers are pushing their personal limits to meet their own objectives. Our ADVANCED products will bring them even closer to accessing their inaccessible.

PERFORMANCE Mountaineering

Mountaineering is undeniably one of the most demanding and committing activities in our sport, especially when the objective is technically difficult. Climbers who are pursuing challenging objectives in the mountains are always seeking superior equipment to give them the edge they need to succeed, especially when it comes to technical gear. For helmets, harnesses, ice tools, crampons, ice screws, ropes, and lighting alike, experts in the vertical world will find that Petzl is the most reliable and performance-driven partner for every extraordinary adventure.

Harnesses

Petzl harnesses are designed to meet the needs of all those who play in the vertical world, whether it's for climbing, mountaineering, via ferrata, canyoning, or caving. We offer a variety of models suited for different body types and different uses.

Designs for different body types:

- With adjustable leg loops, suitable for most body types and all seasons (winter and summer use)
- Without adjustable leg loops, making it lightweight and optimizing freedom of movement
- Women's harness with angled waistbelt and an adapted rise and waistbelt-to-leg-loop ratio

Capacity to carry gear suited to the activity:

- For gym climbing, via ferrata, glacier travel, or classic mountaineering, two gear loops are sufficient
 - For single pitch or big wall climbing, four gear loops are necessary
- For activities requiring a lot of gear, such as trad climbing, technical mountaineering, or ice climbing, a fifth gear loop is more practical.

Harnesses for mountaineering and ski touring:

- Weight and bulk are minimized
- Practical to put on while wearing crampons or skis

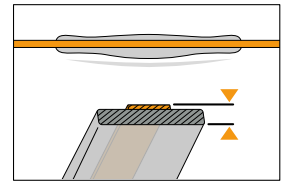

Petzl Harness Technology

For certain climbing and mountaineering harnesses, Petzl uses specific technologies: FRAME, ENDOFRAME, FUSEFRAME, WIREFRAME or MATRYX®. These constructions are adapted to different expectations that climbers may have, whether you're just starting out, an active climber, or looking for high performance.

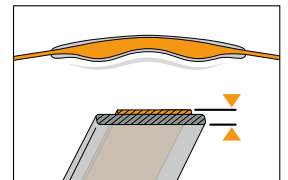

FRAME Technology

This construction forms the core of CORAX and OUISTITI harnesses and combines a thick layer of foam with central webbing on the waistbelt and leg loops. The load is distributed by the webbing that is surrounded by foam. This construction allows for excellent durability and comfort when hanging for long periods on a climb.

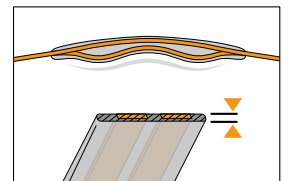

ENDOFRAME Technology

This construction method uses thin foam and specific variable-width webbing sewn onto the foam for optimal load distribution. The waistbelt webbing is wider at the hips, providing support while remaining lightweight. We've paid careful attention to provide maximum comfort and greatly reduce pressure points or hot spots on the waistbelt. ENDOFRAME technology is used in SAMA, SELENA, ADJAMA, LUNA, and MACCHU harnesses.

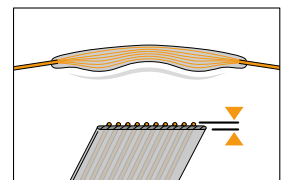

FUSEFRAME Technology

This construction uses thin thermoformed foam and doubled interior webbing for greater comfort and lightness. This gives the harnesses a smooth and clean exterior surface without adding thickness, for improved abrasion resistance. FUSEFRAME technology gives the HIRUNDOS, AQUILA, and FLY harnesses (removable foam) a clean, smart design that is light and comfortable.

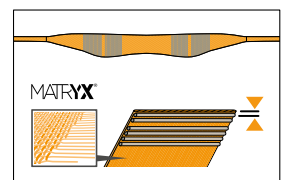

WIREFRAME Technology

WIREFRAME technology uses HMPE strands. These strands are used in the waistbelt and leg loops to optimally distribute pressure, ensuring maximum comfort and freedom of movement for the climber. This construction gives this technical harness an exceptional weight-to-comfort ratio. WIREFRAME technology, applied to a very sleek design with very slim technical lines, is perfectly suited to SITTA and ALTITUDE harnesses.

MATRYX® Technology

This construction is composed of woven HMPE strands that lay across the entire surface of the harness, with special strands interwoven in specific areas. This process is made possible with the high-performance MATRYX® fabric. It allows the waistbelt and leg loops to be exceptionally low-profile, lightweight, and flexible, so the harness moves seamlessly with the climber, practically unnoticeable when worn. Special weave patterns on the hips and back of the thighs provide added comfort and support for hanging in the harness and carrying gear. The MATRYX® technology used for the WHISPER harness is minimalist, pushing the limits of compact and lightweight design, without forgoing comfort.

WHISPER®

Ultra-lightweight and technical harness for high-performance climbing and mountaineering

Extremely lightweight and technical, the WHISPER harness is a breath of fresh air for dedicated mountaineers and climbers. Its innovative construction with MATRYX® fabric is focused on the necessities: it's compact and lightweight without forgoing comfort. With a slim and flexible waistbelt and leg loops, it allows you to move freely. Featuring five gear loops, it provides the capacity to carry all the gear you need for demanding mountain expeditions and rock routes. Its tie-in points and gear loops are designed to provide long-lasting abrasion resistance.

High-performance MATRYX® fabric provides superior balance between low weight, technicality, and comfort.

Exceptionally slim waistbelt and leg loops provide absolute freedom of movement, making the harness practically unnoticeable when worn.

Two very large front gear loops and three in the rear to carry necessary mountaineering gear.

- Extremely lightweight and compact:
 - Only 170 g in size M
 - Ultra-compact, it takes up minimal space in a pack
- Optimal freedom of movement:
 - Exceptionally slim waistbelt and leg loops provide absolute freedom of movement, making it practically unnoticeable when worn
 - Excellent breathability, due to individually coated strands of HMPE (high-modulus polyethylene) and nylon, specific to the high-performance MATRYX® fabric; this process allows the fabric to quickly wick away sweat when the climber is moving
 - Comfortable while resting on the rope or when managing gear at the anchor; MATRYX® Technology construction allows specific areas to be padded for comfort and support

- Enhanced durability:
 - Highly abrasion-resistant due to the composition of MATRYX® fabric
 - Tie-in points, webbing, and gear loops reinforced with HMPE for greater resistance to abrasion and rubbing
- Carries and organizes a large quantity of gear:
 - Two very large, rigid gear loops in front for carrying a large amount of gear and to easily clip and unclip carabiners
 - Two rear gear loops don't get in way of wearing a backpack
 - Flexible rear loop for a tag line or essential accessories
 - Two slots for CARITOOL tool holders optimized for CARITOOL EVO and compatible with CARITOOL

Product Specifications

- Material(s): high-modulus polyethylene, nylon, polyester, aluminum
- Certification(s): CE EN 12277 type C, UIAA

ADJAMA

Comfortable and adjustable harness for single pitch, multi-pitch, and trad climbing

The comfort you want in every season! The ADJAMA is a harness designed for single pitch, multi-pitch, and trad climbing. With adjustable leg loops, the fit can be adapted to a wide range of climbers. Its construction is tapered and smooth-seamed for comfort when you're hanging or in action. With five gear loops, you can rack and organize all your gear within reach.

Waistbelt and leg loops are tapered and have smooth-seamed edges for comfortable support when hanging and climbing.

Leg loops are adjustable with DOUBLEBACK buckles, to adapt to different body types and seasonal clothing.

Two very large front gear loops and three in the rear, with one in the center to carry necessary gear, including for trad climbing.

- Adjustable and comfortable harness:
 - Waistbelt and leg loops are tapered and have smooth-seamed edges for comfortable support
 - Leg loops are adjustable with DOUBLEBACK buckles, to adapt to different body types and seasonal clothing
 - ENDOFRAME Technology construction allows optimal weight distribution
 - Breathable, moisture-wicking interior fabric
- Carries and organizes a large quantity of gear:
 - Two very large, rigid gear loops in front for carrying a large amount of gear and to easily clip

- and unclip carabiners
 - Two rear gear loops are flexible, angled to bring gear to the front, and comfortable when carrying a backpack
 - One large, center rear gear loop for racking gear used at belay stations or other accessories
 - Rear accessory loop for chalk bag, shoes, quick link, tag line, or other gear
 - Compatible with CARITOOLO EVO tool holders for racking ice screws
- Eco-design: Waistbelt and leg loop exterior fabric are made from 100 % recycled polyester

LUNA

Comfortable and adjustable women's harness for single pitch, multi-pitch, and trad climbing

The comfort you want in every season! Built for women, the LUNA is a harness designed for single pitch, multi-pitch, and trad climbing. With adjustable leg loops, the fit can be adapted for all climbers. Its construction is tapered and smooth-seamed for comfort when you're hanging or in action. With five gear loops, you can rack and organize all your gear within reach.

Waistbelt equipped with a DOUBLEBACK buckle to easily adjust the harness.

Two very large front gear loops and three in the rear, with one in the center to carry necessary gear, including for trad climbing.

Compatible with CARITOOL EVO tool holder for racking ice screws.

- Adjustable and comfortable women's harness:
 - Waistbelt shape, rise, and waistbelt-to-leg-loop ratio specifically designed for women
 - Waistbelt and leg loops are tapered and have smooth-seamed edges for comfortable support
 - Leg loops are adjustable with DOUBLEBACK buckles, to adapt to different body types and seasonal clothing
 - ENDOFRAME Technology construction allows optimal weight distribution
 - Breathable, moisture-wicking interior fabric
- Carries and organizes a large quantity of gear:
 - Two very large, rigid gear loops in front for

- carrying a large amount of gear and to easily clip and unclip carabiners
 - Two rear gear loops are flexible, angled to bring gear to the front, and comfortable when carrying a backpack
 - One large, center rear gear loop for racking gear used at belay stations or other accessories
 - Rear accessory loop for chalk bag, shoes, quick link, tag line, or other gear
 - Compatible with CARITOOL EVO tool holders for racking ice screws
- Eco-design: Waistbelt and leg loop exterior fabric are made from 100 % recycled polyester

Product Specifications

- Material(s): polyester, 100 % recycled polyester, EVA, polyurethane, high-modulus polyethylene, aluminum
- Certification(s): CE EN 12277 type C, UIAA
- Comes with a storage pouch made from 100 % recycled polyester fabric

SAMA

Comfortable harness for the gym, single pitch, or multi-pitch routes

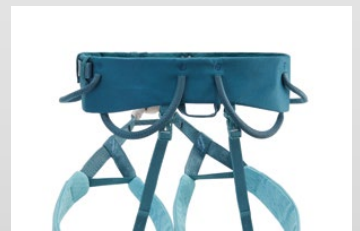

Whether you're at the gym or the crag, SAMA is a comfortable harness for your sport climbing sessions! The elasticized leg loops provide a dynamic fit and the waistbelt is flexible and slimmer in front to give great freedom of movement. Four gear loops provide enough space to rack all the gear you need, including for multi-pitch climbing.

Waistbelt and leg loops are tapered and have smooth-seamed edges for comfortable support when hanging and climbing.

Elasticized leg loops and flexible connection straps provide great freedom of movement.

Two front gear loops and two in the rear to carry all the gear you need, including for multi-pitch climbing.

- Comfortable harness offering great freedom of movement:
 - Waistbelt and leg loops are tapered and have smooth-seamed edges for comfortable support
- Great freedom of movement, with elasticized leg loops and flexible connection straps, helping keep the harness in place
 - ENDOFRAME Technology construction allows optimal weight distribution
 - Breathable, moisture-wicking interior fabric
- Capacity for carrying gear:
 - Two front gear loops are rigid to easily clip and unclip quickdraws

- Two rear gear loops are flexible, angled to bring gear to the front, and comfortable when carrying a backpack
 - Rear accessory loop for chalk bag, shoes, quick link, tag line, or other gear
 - Compatible with CARITOOLO EVO tool holders for racking ice screws
- Eco-design:
 - Waistbelt and leg loop exterior fabric is made from 100 % recycled polyester
 - The DARK GRAY version features an irregular pattern, limiting fabric waste in production Every harness is unique!

Product Specifications

- Material(s): polyester, 100 % recycled polyester, EVA, polyurethane, high-modulus polyethylene, aluminum
- Certification(s): CE EN 12277 type C, UIAA
- Comes with a storage pouch made from 100 % recycled polyester fabric

Petzl, Beyond the Standards

Petzl goes above and beyond the standard requirements for all our helmets, offering effective protection against falling objects and side, front, and rear impacts.

TOP AND SIDE PROTECTION: What Are the Levels of Protection?

1. Standard Protection

Standard protection against falling objects (such as rocks or ice)

EN 12492 / UIAA 106 Standard tests

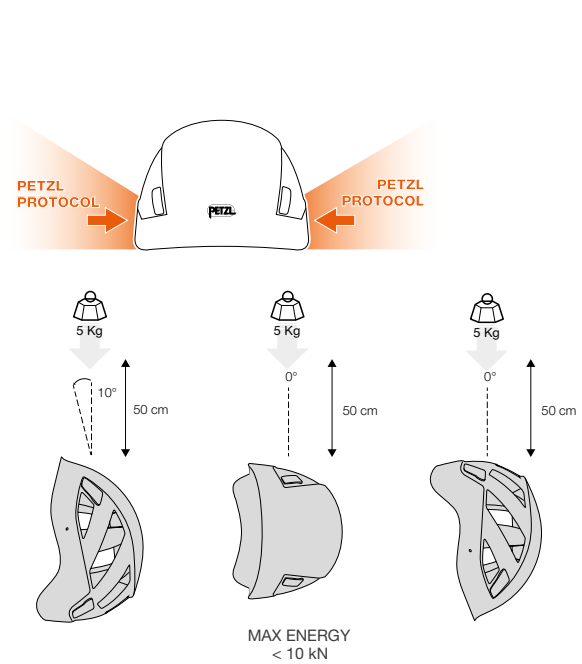

2. Enhanced Protection

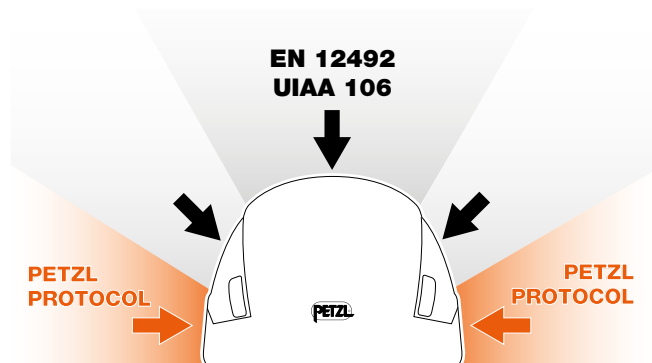

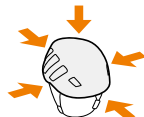

Enhanced protection against falling objects and against side, front, and rear impacts

Supplementary tests performed by Petzl

TOP AND SIDE PROTECTION = Standard Protection + Enhanced Protection

TOP AND SIDE PROTECTION

Climbing and mountaineering helmets with CE ski touring helmet certification

With protection against falling objects (EN 12492) and enhanced protection against lateral, front, or rear impact (Petzl's TOP AND SIDE PROTECTION label), Petzl helmets effectively protect the head during numerous activities: climbing, mountaineering, and now ski touring, where wearing a helmet is not yet the norm.

What are the different requirements for a ski touring helmet?

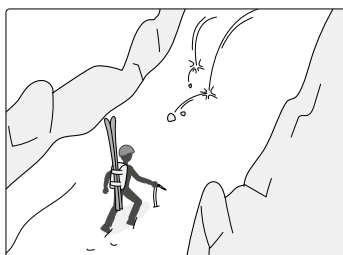

Ventilation

In ski touring, the physical effort generated on the climb is considerable and requires appropriate gear. Only a lightweight, and most importantly, ventilated helmet can be comfortably worn from beginning to end of an outing.

Head Protection

Throughout a ski touring day, climbing or descending, the skier may face any of the following risks:

- Rockfall:

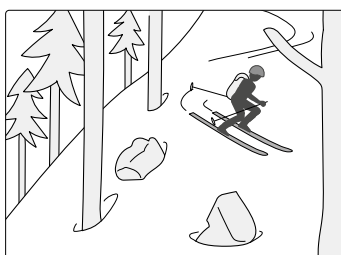

As in mountaineering, the skier may be exposed to rock or icefall, for example when climbing a couloir.

- Side, front, and rear impacts:

A fall while climbing on a steep or frozen slope above a rocky outcrop.

A fall while descending caused by terrain hazards: rocks, trees, ice blocks, crevasses, avalanches, or other possible hazards.

The best balance of ventilation and protection for the head will encourage participants to wear a helmet from beginning to end of an outing.

Why has Petzl pursued the creation of a new CE certification for ski touring helmets?

Currently there is no reference standard outlining the health and safety requirements for a ski touring helmet, unlike downhill skiing, which follows the guidelines of the EN 1077 class B standard.

Therefore, in order to obtain CE certification for a helmet used for ski touring, Petzl approached a certifying body to create a standard that takes into consideration the practice, the environment, and the dangers of ski touring.

This reference standard is based primarily on:

- The requirements of the mountaineering helmet standard (EN 12492), to provide rockfall protection, as well as maximum ventilation for comfort during ascents
- Requirements for enhanced protection against lateral, front, and rear impacts (as described in the Petzl test protocol for the TOP AND SIDE PROTECTION label)

This reference standard is the PCSR (Protocol for ski touring helmets). It is public and available to other manufacturers for certification of their helmets.

Vivian Bruchez on the southeast ridge of the Loiselinden, 1240 m, Norway © 2020 Petzl Distribution - Mathis Dumas

Petzl offers helmet models for climbing, mountaineering, or via ferrata, for intensive or regular use, or for your first time trying out these activities.

Two other models round out the range: the PICCHU helmet for children and the BOREO CAVING helmet designed for cavers.

PICCHU
Children's climbing and cycling helmet with enhanced protection

BOREO® CAVING
Caving helmet with mounting plates for DUO headlamp

Petzl Helmet Construction

Construction	Principle of Shock Absorption	Petzl Helmets
Hybride  EPP foam shell and EPS foam liner injected under a thin polycarbonate crown	The crown protects the liner and helps stop sharp objects at the top of the helmet. The liner alone absorbs top impacts by deformation. The shell alone absorbs side, front, and rear impacts by deformation.	SIROCCO®
In-Mold  EPS foam liner injected under a thin polycarbonate shell	The shell protects the liner and helps stop sharp objects. The liner alone absorbs impacts by deformation.	METEOR METEORA
Hard shell / Hybride  Hard ABS shell protects the EPP and/or EPS foam liner	The shell protects the liners, helps stop sharp objects, and distributes impacts. The liners absorb impacts by deformation.	BOREO® BOREA® PICCHU

EPP: Expanded polypropylene
EPS: Expanded polystyrene
ABS: Acrylonitrile butadiene styrene

KIT

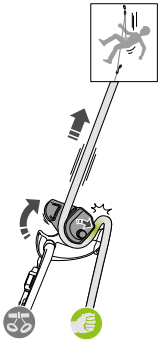

Belay Devices and Descenders

Petzl Belay Systems: Two Types of Devices

Belay Devices with Cam-Assisted Blocking

- Working Principle

When a climber falls or rests, the rope tightens and the cam pivots to pinch the rope and block it.

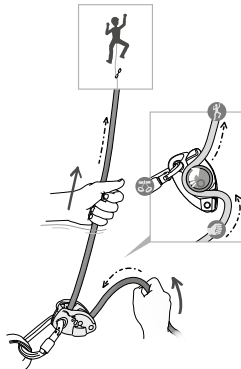

- Advantages

- **Comfortable belay with cam-assisted blocking**, which minimizes the strength required of the brake-side hand and is especially useful for working a route: trying a move multiple times and holding the climber
- **Considerable leeway for brake-side hand position**, regardless of the angle between the climber side and brake side of the rope
- **Exceptionally comfortable descent**, with an ergonomic handle that gives you progressive control of the rope feed

- Three different belay devices designed to optimize different activities

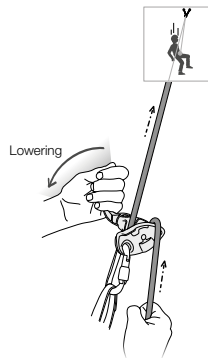

NEOX®
Ideal for lead climbing

NEOX® features an integrated wheel that allows you to smoothly and quickly pay out slack to the climber.

GRIGRI®
Compact and versatile for belaying lead and top rope climbing

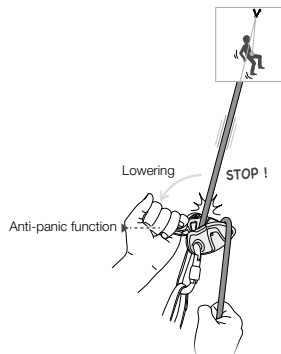

For lead and top rope climbing, GRIGRI® provides comfortable belaying and control of the descent.

GRIGRI® +
Optimized for top rope climbing, frequent use, and learning

Top-rope or lead belay mode is chosen with a selector knob.

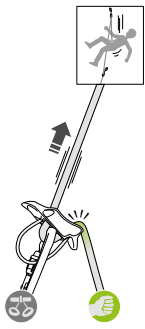

With an anti-panic handle and top rope mode that makes taking up slack easier, GRIGRI® + is specifically designed for learning.

Belay Devices and Descenders

Manual Braking Belay/Rappel Devices

- Working Principle

When a climber falls or rests, the brake hand grips the rope firmly and pulls it downward, the rope gets pressed into the braking grooves, thus increasing the friction until the rope stops.

- Advantages

- **Simple, compact, and lightweight**
- **Compatible with single, half, and twin dynamic ropes**
- **Comfortable rappels** due to efficiency of the braking grooves

REVERSO®

Versatile, lightweight belay/rappel device, for use with one or two rope strands and ability to belay a second climber from the anchor

VERSO

Compact, lightweight belay/rappel device, for use with one or two rope strands and for rappelling

Types of Ropes

Dynamic Ropes

Single Ropes ①

Ropes used as a single strand. These are mainly used for single-pitch climbing. Some climbers also use them for multi-pitch climbing or mountaineering.

Half ② and Twin ③ Ropes

These are certified to two types of the CE EN 892 standard.

- Half Ropes: ropes used in pairs that may be clipped separately or together during progression. They are recommended for rappels and to facilitate rope drag management. They provide a backup in case one of the strands is damaged by a falling rock or a sharp edge.
- Twin Ropes: ropes used in pairs that, unlike half ropes, must always be clipped together during progression. They are recommended for rappels.

Multi-Type Ropes

Multi-type ropes are certified to three types of the CE EN 892 standard. They may be used as a single, half, or twin rope.

Low Stretch Kernmantle Ropes

Low stretch kernmantle ropes have low elongation and are very resistant to wear and abrasion. They're designed for canyoning, caving, hauling, and installing fixed ropes.

Treatment and Finishes on Petzl Ropes

Ever Flex
Special treatment stabilizes core strands and improves consistency, providing excellent grip and consistent handling over time.

UltraSonic Finish
The core and the sheath are bonded together at the rope ends for greater durability and to prevent frayed ends (except for the 200-meter length).

Climb Ready
Specific coil makes the rope ready for use; helps the user avoid initial uncoiling mistakes (except for the 200-meter length).

Middle Mark
Indicates the middle of the rope for easier rope management (except for the 200-meter length).

Additional Treatments For Mountaineering Ropes

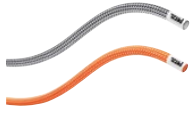

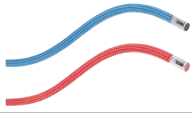

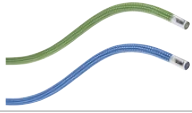

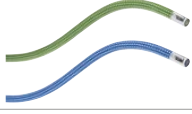

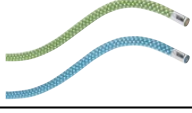

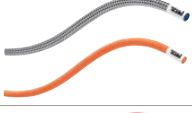

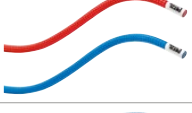

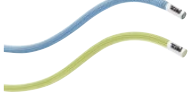

Guide UIAA DRY
The UIAA Guide Dry treatment is our most complete water repellent treatment for frequent use in wet environments: ice climbing and mountaineering. It meets the requirements of the UIAA Water Repellent Test and improves rope's resistance to dirt and abrasion.

Duratec DRY
Dry treatment making the rope more resistant to water, dirt, and abrasion. Handling, grip, and other characteristics are maintained longer in cold, wet conditions.

Starting in 2025, all Petzl ropes, including those featuring the UIAA Guide Dry treatment and Duratec DRY, will be made without PFAS (per- and polyfluoroalkyl substances), in order to reduce our environmental impact.

Low Stretch Kernmantle Ropes

**NEW
2025**

PUSH + 9 mm

Ultra-durable 9 mm low stretch kernmantle rope for canyoning and caving

The PUSH + is an ultra-durable, low stretch, 9 mm kernmantle rope designed for independent use canyoning and caving. Its hybrid high-modulus polyethylene (HMPE) sheath construction offers a good grip and optimal strength-to-weight ratio. Available in four lengths: 40, 60, or 70 meters coiled, or 200 meters in bulk.

Its construction makes it easy to grip and allows good descent control.

- Low stretch kernmantle rope with good handling for independent use canyoning and caving, or for hauling:
 - EverFlex treatment: special treatment and weave improve the rope's consistency; offers excellent grip and consistent handling over time
 - Its construction provides a solid grip for good descent control
 - Its diameter and flexibility make it highly compact and easy to stack in a rope bag
- Optimal strength-to-weight ratio:
 - Hybrid high-modulus polyethylene (HMPE) and

nylon sheath construction provides excellent abrasion resistance

- Maintains flexibility, which helps prolong its lifespan

- Different finishes depending on length:

- 40-, 60- and 70-meter lengths come ready to use, equipped with a ClimbReady coil, Middle Mark identification, and UltraSonic Finish on the rope ends, and include a margin to compensate for rope shrinkage during the first few uses
- 200-meter length comes stacked in the box so different lengths can be optimized according to use

Product Specifications

- Diameter: 9 mm
- Material(s): Nylon, polyester, high-modulus polyethylene
- Certification(s): CE EN 1891 type B, UIAA
- Breaking strength: 23 kN
- Strength tied with a figure-eight knot: 14 kN
- Shock load (factor 0.3): 4.2 kN
- Number of factor 1 falls: 10
- Weight per meter: 54 g
- Construction: 32 carrier
- Percentage of sheath: 43 %
- Static elongation: 3.2 %

CLUB + 10 mm

Ultra-durable 10 mm low stretch kernmantle rope for canyoning and caving

The CLUB + is an ultra-durable, low stretch, 10 mm kernmantle rope designed for canyoning and caving groups. Its hybrid high-modulus polyethylene (HMPE) sheath construction offers a good grip and great abrasion resistance. Available in four lengths: 40, 60, or 70 meters coiled, or 200 meters in bulk.

The rope construction and diameter contribute to excellent descent control and provide very good grip suitable for a wide range of users.

- Low stretch kernmantle rope with very good grip for group canyoning and caving, or installing fixed lines:
 - EverFlex treatment: special treatment and weave improve the rope's consistency; offers excellent grip and consistent handling over time
 - Rope construction and diameter contribute to excellent descent control and provide very good grip suitable for a wide range of users
- Optimal durability:
 - Hybrid high-modulus polyethylene (HMPE) and nylon sheath construction provides excellent

- abrasion resistance
 - Maintains flexibility, which helps prolong its lifespan
- Different finishes depending on length:
 - 40-, 60- and 70-meter lengths come ready to use, equipped with a ClimbReady coil, Middle Mark identification, and UltraSonic Finish on the rope ends, and include a margin to compensate for rope shrinkage during the first few uses
 - 200-meter length comes stacked in the box so different lengths can be optimized according to use

Product Specifications

- Diameter: 10 mm
- Material(s): Nylon, polyester, high-modulus polyethylene
- Certification(s): CE EN 1891 type B, UIAA
- Breaking strength: 28 kN
- Strength tied with a figure-eight knot: 18 kN
- Shock load (factor 0.3): 4,5 kN
- Number of factor 1 falls: 15
- Weight per meter: 67 g
- Construction: 40 carrier
- Percentage of sheath: 38 %
- Static elongation: 2.3 %

KIT

NEW
2025

CAVING LINE 7 mm

Ultra-compact and ultra-lightweight, low stretch cord designed for cave exploration

Designed for long subterranean explorations, the CAVING LINE is a low stretch cord, 7 mm in diameter. Extremely compact and lightweight (30 g/m), it is easy to store in a pack. It has the benefit of the EverFlex treatment, ensuring continued flexibility over time. The sheath texture gives it good grip when descending and its construction provides excellent abrasion resistance. Comes in 200-meter length.

Thick, textured sheath offers good grip.

- Ultra-compact cord with good grip:
- Ultra-compact and ultra-lightweight to limit bulk in the kit during long explorations
- Thick, textured sheath offers good grip
- Excellent balance of low stretch and elasticity for efficient ascents
- Compatible with SIMPLE and STOP caving descenders, with CROLL, BASIC, and PANTIN ascenders, and with MICRO TRAXION and NANO TRAXION progress-capture pulleys ⁽¹⁾
- Remains flexible over time:

- EverFlex treatment: special treatment and weave improve the rope's consistency; offers good grip and consistent handling over time
- Easy to store in the pack, because the cord does not stiffen
- flexible cord makes it easier to tie and untie knots
- Optimal strength-to-weight ratio:
- Very lightweight (30 g/m)
- Hybrid polyester and high-modulus polyethylene (HMPE) sheath construction offers good grip and great abrasion resistance

Product Specifications

- Diameter: 7 mm
- Material(s): Nylon, polyester, high-modulus polyethylene
- Certification(s): CE 564, UIAA
- Strength tied with a figure-eight knot: 10 kN
- Weight per meter: 30 g
- Construction: 24 carrier
- Percentage of sheath: 42 %

Carabiners and Quickdraws

Features of Petzl Carabiners

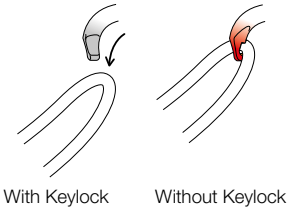

Fluid Interior Design

The fluid interior design of Petzl locking carabiners limits the risk of the nose getting caught while clipping and facilitates rotation of the carabiner.

H-Frame

Carabiners have an H-frame that provides an optimal strength-to-weight ratio, protects the markings from abrasion, and offers excellent handling, even when wearing gloves.

Keylock System

To provide optimal efficiency, all Petzl carabiners use the Keylock system: the nose of the carabiner, where the body and gate meet, does not have a notch that could snag on anchors, ropes, harness equipment loops, or other gear.

Locking Carabiners

Shapes and Uses

D Shape

D-shaped carabiners are the most versatile and are efficient in a variety of different situations.

Pear Shape

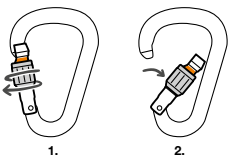

These carabiners have a large basket. They are recommended for carrying gear, tying a Munter hitch, or to use at anchor points.

Oval Shape

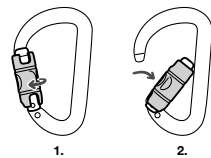

These carabiners are designed for use with pulleys and progress-capture pulleys.

Locking Systems

SCREW-LOCK

With an easy-to-open gate, it can be locked or not according to need. The red indicator provides a visual warning when the carabiner is unlocked. This system is ideal for harsh environments where contaminants (mud, ice) could cause an automatic locking system to jam.

TWIST-LOCK

Automatic locking system designed for very frequent use, it can be attached at the end of a lanyard or used to connect a GRIGRI belay device to a harness. Double-action opening by turning the sleeve, then pressing on the gate.

BALL-LOCK

Automatic locking system designed for frequent use. The triple-action opening consists of pressing on the green indicator, turning the sleeve, then pressing on the gate. The green button indicates when the gate is locked.

TRIACT-LOCK

Automatic locking system. The triple-action opening consists of raising and turning the sleeve, then pressing on the gate.

Carabiners and Quickdraws

Non-Locking Carabiners

MonoFil or Classic Gate

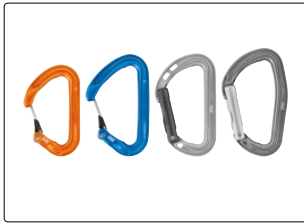

Very light due to MonoFil technology, these carabiners provide a very smooth clip. They also feature the Keylock system to help avoid snagging.

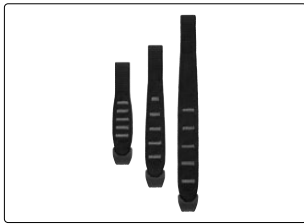

Classic straight gates have grooves for better grip when opening the carabiner.

Different Sizes

Larger carabiners are easier to handle and clip, even while wearing gloves. Smaller carabiners are more lightweight and compact.

Quickdraws

Quickdraw slings are available in two or three lengths to reduce rope drag in certain situations, such as small roofs, overhangs, or offset anchor points.

All quickdraws come with a STRING to maintain the proper orientation of the carabiner and facilitate clipping.

Choosing Your Petzl Quickdraws

ANGE FINESSE For low weight

Designed for climbing situations where every gram counts, ANGE FINESSE quickdraws are ultra-light and compact. Available in two lengths and two carabiner sizes.

SPIRIT EXPRESS For greater versatility

A lightweight yet ergonomic solution, SPIRIT EXPRESS quickdraws are ideal for working routes on single pitch or multi-pitch climbs. Available in three lengths.

DJINN AXESS For optimal durability

Combining durability with good handling, DJINN AXESS quickdraws are designed for sport climbing. Available in three lengths.

VERTIGO WIRE-LOCK

Carabiner for SCORPIO VERTIGO lanyard

The VERTIGO WIRE-LOCK carabiner is designed for use on the ends of SCORPIO VERTIGO via ferrata lanyards. Its excellent grip and automatic locking system make it easy to handle when passing intermediate anchors. The large opening and the Keylock system allow the carabiner to be easily connected to the cable. The WIRE-LOCK increases the lifespan of the product when used intensively, compared to classic locking systems.

Keylock system to avoid accidental carabiner snagging.

WIRE-LOCK automatic locking system makes it easy to handle when passing intermediate anchors.

- Designed for use on the ends of SCORPIO VERTIGO and SCORPIO VERTIGO SW via ferrata lanyards
- Easy to handle when passing intermediate anchors:
 - Ergonomic shape provides excellent grip
 - WIRE-LOCK automatic locking system is easy to use
 - Large opening to easily connect carabiner to cable

- Keylock system helps prevent the carabiner from snagging during use
- Specifically designed for intensive use: WIRE-LOCK locking optimizes the number of opening and closing cycles of the gate and increases longevity of the carabiner
- Can be used for canyoning, along with PIRANA CLUB and PIRANA GUIDE descenders

Product Specifications

- Material(s): Aluminum, stainless steel, nylon
- Certification(s): CE EN 12275 types K/B, UIAA

Modular Ice Axes With the ALPEN ADAPT System

With the ALPEN ADAPT system, all ice axes for technical mountaineering, ice climbing, and dry tooling have a modular head that can be adapted to the specific demands of the terrain. Certain picks and hand rests are also modular.

Ice Axe Use and Standards

The range of Petzl ice axes is composed of different families:

- Glacier Travel and Ski Mountaineering Ice Axes
- Classic Mountaineering Ice Axes
- Technical Mountaineering Ice Axes
- Ice Climbing and Dry Tooling Ice Axes

Each ice axe features characteristics that are specific to its use on the certain terrain, including length, as well as shaft and pick shape.

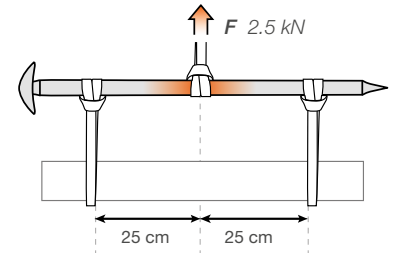

Standards

In terms of standards, ice axes are divided into two types: Type 1 and Type 2. These types make a distinction between basic and technical ice axes.

This distinction is made using different tests:

- Shaft center-load pull test
- Shaft insertion strength test
- Pick levering test

These tests are detailed in the diagrams here.

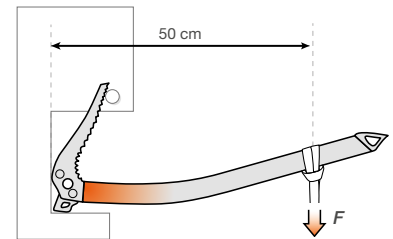

Pull Test

Type 1 Ice Axes

These ice axes have a lower strength requirement than Type 2 ice axes.

They are generally used for skiing, glacier travel, and classic mountaineering.

For Type 1 ice axes, no marking is required, but if there is any, the marking is: B.

F - Type ① 0.6 kN

F - Type ② 0.9 kN

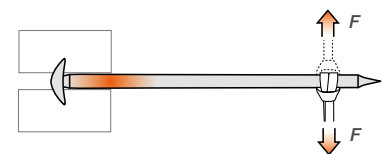

Shaft Insertion Strength Test

Type 2 Ice Axes

These ice axes have the highest strength required by the standard.

They are primarily used for technical mountaineering, ice climbing, and dry tooling.

For Type 2 ice axes, markings are required. The marking is: T.

F - Type ① 42 Nm

F - Type ② 60 Nm

Levering Test

GLACIER

Lightweight ice axe for glacier travel

The lightweight GLACIER ice axe is your go-to companion for glacier travel. With a curved head designed to fit comfortably in your hand, it provides excellent grip in the piolet-canne position. Its stainless steel spike and tapered pick offer high-quality anchoring in hard snow and ice. The GLACIER is available in four lengths: 50, 60, 68, and 75 cm.

Steel pick tapered to 3 mm at the tip for high-quality anchoring.

Stainless steel spike easily penetrates hard snow and ice.

- **Lightweight:**
 - Holes in pick and spike provide lighter weight and options for connecting a carabiner
 - Only 320 g in 50 cm version
- **Comfortable grip:**
 - Supportive surface on upper part of the pick is designed to fit comfortably in your hand and provides excellent grip in the piolet-canne position
 - Grooves cut into the shaft provide superior grip for

- technical ice climbing
- **High-quality anchoring:**
 - Steel pick tapered to 3 mm at the tip for high-quality anchoring
 - Stainless steel spike easily penetrates hard snow and ice
 - Durable adze for efficiently carving out steps
- Available in four lengths: 50, 60, 68, and 75 cm

Product Specifications

- Pick type: 1
- Shaft type: 1
- Material(s): tempered steel, aluminum, nylon
- Certification(s): CE, UIAA
- Comes with protective caps for the ice axe pick and spike

GLACIER LINKIN

Lightweight ice axe for glacier travel, with leash

The GLACIER ice axe with a leash! The lightweight GLACIER LINKIN ice axe is your go-to companion for glacier travel. With a curved head designed to fit comfortably in your hand, it provides excellent grip in the piolet-canne position. Its stainless steel spike and tapered pick offer high-quality anchoring in hard snow and ice. To help prevent dropping the ice axe, it is equipped with a removable leash that can be adjusted from 50 to 75 cm in length. The GLACIER is available in four lengths: 50, 60, 68, and 75 cm.

Steel pick tapered to 3 mm at the tip for high-quality anchoring.

Stainless steel spike easily penetrates hard snow and ice.

The LINKIN leash can be quickly removed by simply untying the knot.

- Lightweight:
 - Holes in pick and spike provide lighter weight and options for connecting a carabiner
 - Only 340 g in 50 cm version
- Comfortable grip:
 - Supportive surface on upper part of the pick is designed to fit comfortably in your hand and provides excellent grip in the piolet-canne position
 - Grooves cut into the shaft provide superior grip for technical ice climbing

- Designed to help prevent dropping the ice axe, the LINKIN leash is removable and can be adjusted from 50 to 75 cm in length
- High-quality anchoring:
 - Steel pick tapered to 3 mm at the tip for high-quality anchoring
 - Stainless steel spike easily penetrates hard snow and ice
- Durable adze for efficiently carving out steps
- Available in four lengths: 50, 60, 68, and 75 cm

Crampons

Petzl crampons are designed for moving over different types of terrain. Each one is designed for a specific use. However, their versatility also enables efficient movement in mixed terrain that may be encountered in alpine environments.

Petzl Binding Systems

Petzl crampons are available with three different heel/toe bail combinations. This makes them adaptable to different footwear with or without heel and toe welts.

ALPEN ADAPT

Modular Crampons With the ALPEN ADAPT System

Modular heel/toe bail binding system

Petzl offers a large range of heel and toe bails systems, making crampons compatible with a wide variety of boots: for mountaineering, skiing, snowboarding, or telemark skiing.

FIL and FIL FLEX bindings have three versions to adapt to different boot shapes, narrow or wide.

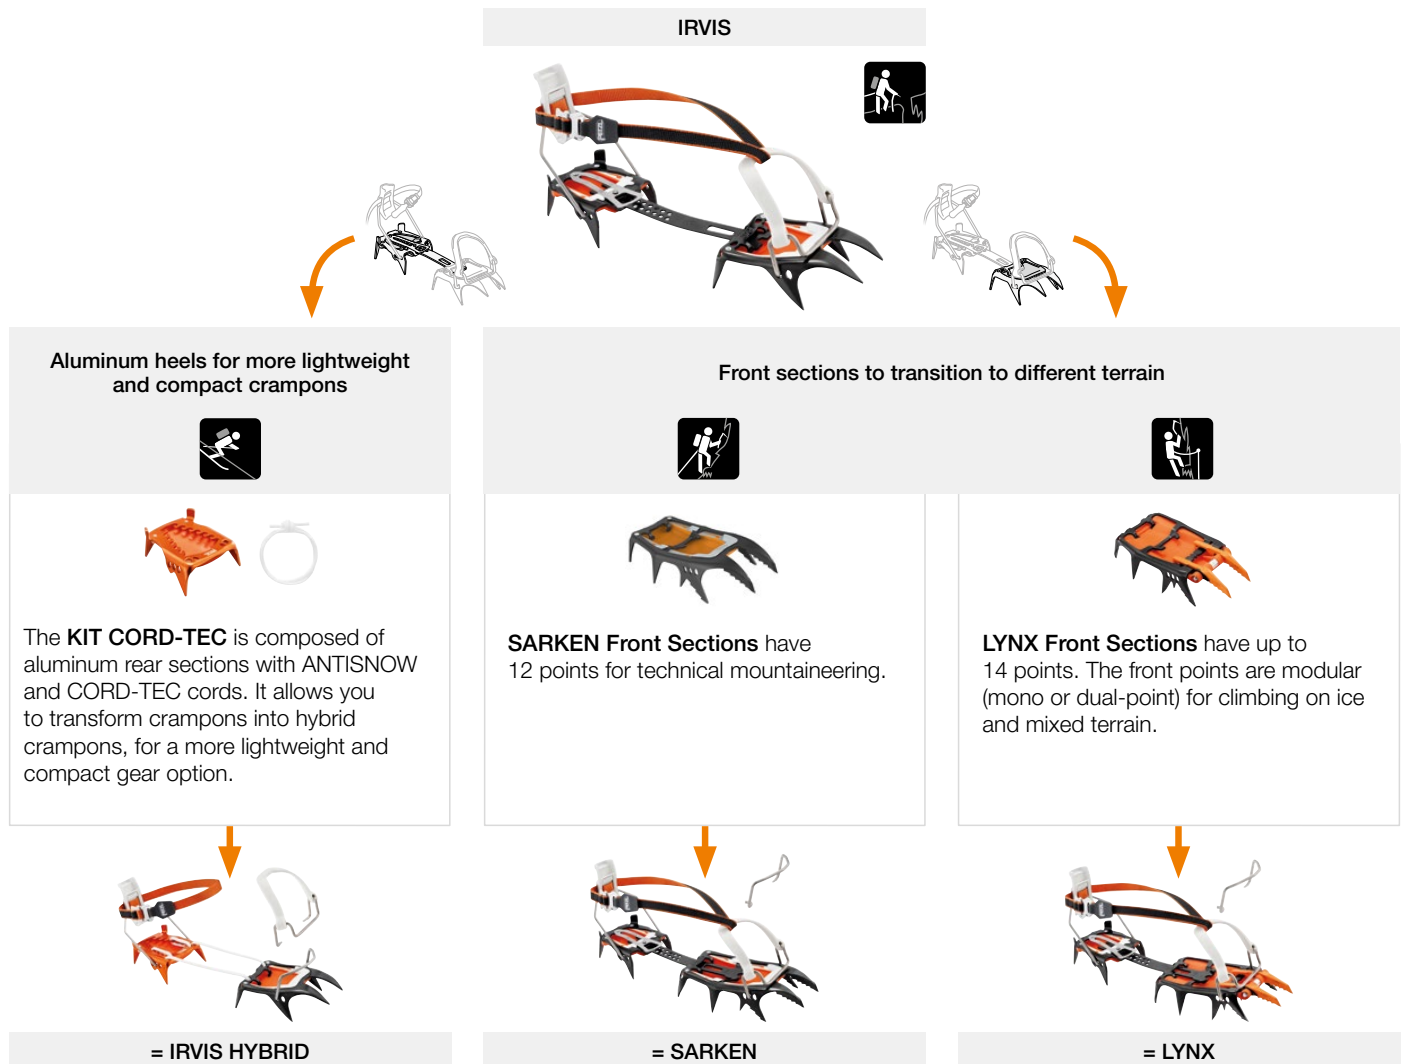

Starting in 2024, all these bindings will be compatible with all Petzl crampons.

Note: Reference the crampon technical notices to find information about compatibility between boots and binding systems.

Modular front and rear sections

The ALPEN ADAPT system also offers front and rear section modularity, so you can use the configuration that best fits your objective.

Example of system modularity with IRVIS crampons and LEVERLOCK UNIVERSEL (LLU version) bindings

KIT

Ascenders

Petzl ascenders are designed for ascending fixed ropes, but they also have other uses including helping a second climber who is having trouble, hauling a victim out of a crevasse or up a wall, or self-belaying. For this, there are several types of ascenders: handled ascenders, chest ascenders, and backup ascenders.

Types of Petzl Ascenders

Hand Ascenders

Because of their excellent handling, these ascenders are mainly used for ascending ropes. Their design also provides various ways to install the device on a rope to make a pulley system or haul a pack.

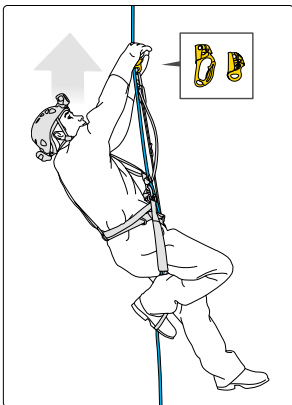

ASCENSION

Handled ascender with a comfortable, powerful grip

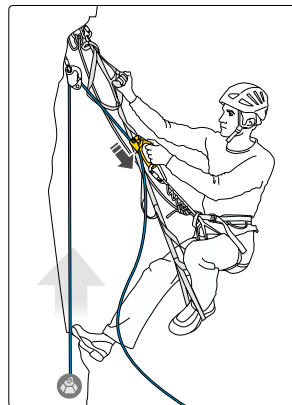

BASIC

Compact and lightweight ascender

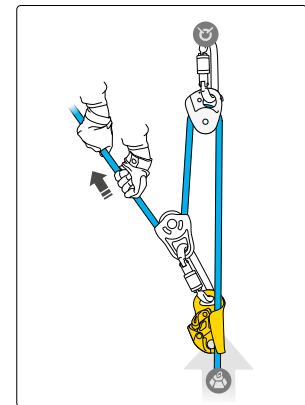

Rope ascent with hand ascender installed above the user

Examples of other ways to use hand ascenders

Hauling with an ASCENSION handled ascender

Pulley system with a BASIC ascender

Chest Ascenders

Installed directly to the harness, they are used with a hand ascender for ascending a rope.

CROLL® S

Reinforced chest ascender for thin to medium-diameter ropes

CROLL® L

Chest ascender for large-diameter ropes

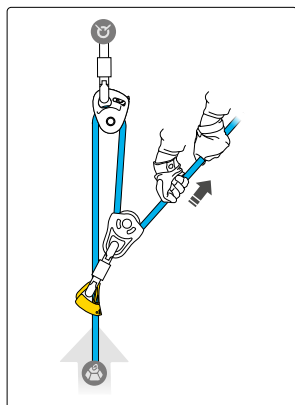

Ascenders

Backup Ascender

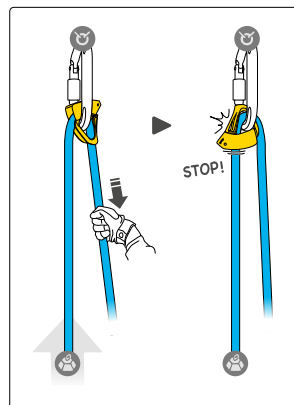

TIBLOC

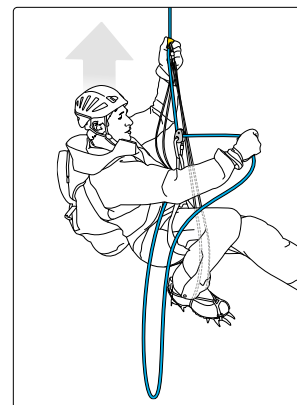

Ultralight and compact, TIBLOC is a backup ascender that adapts readily to situations other than ascending ropes, such as pulley systems or progress capture.

Pulley System

Progress Capture

Ascending a Rope

Ascender Accessories

For greater efficiency and convenience when ascending, Petzl offers accessories for use with hand and chest ascenders.

PANTIN

Foot ascender

FOOTAPE

Adjustable webbing foot loop

FOOTCORD

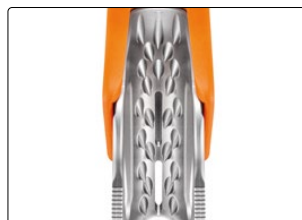

Adjustable foot loop made with HMPE cord for greater versatility and optimal durability

Locking Systems

Rope blocking with toothed cam (all ascenders except TIBLOC)

The teeth initiate the locking action and the cam pinches the rope. Blocking is optimal in a variety of conditions, including when the rope is wet, frozen, or muddy, all while reducing the effort needed to slide the device upward.

Rope blocking via carabiner compression and toothed frame (TIBLOC)

The carabiner compresses the rope into the toothed frame. The self-cleaning slot enables use in a variety of conditions, including when the rope is wet, icy, or muddy. Ultra-lightweight solution using only the teeth and carabiner to block the rope.

Lanyards are essential in many activities including via ferrata, caving, and canyoning. Petzl offers lanyards with or without energy absorbers, that respond to the specific needs of these activities.

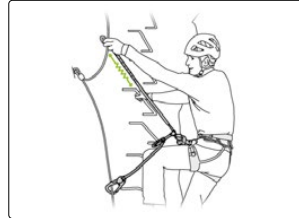

Via Ferrata Lanyards

• Lightweight and compact in order to easily move around

SCORPIO lanyards have a lightweight and ultra-compact energy absorber, reducing bulk and allowing the user to more easily move through the course.

• Two elasticized arms and a short arm

The elasticized arms offer long extension capacity for easier progression and to adapt to different heights. The short arm can be used to easily rest on a rung (carabiner not included).

• Easy to use, ergonomic carabiners

The VERTIGO WIRE-LOCK carabiners are lightweight and provide excellent grip.

Optimal grip with ergonomic EASHOOK carabiners. They are easy to handle when passing intermediate anchors and designed for a wide range of hand sizes.

• Versions with a swivel provide even more comfort

The SCORPIO VERTIGO SW and SCORPIO EASHOOK SW are equipped with a swivel that keeps the arms from tangling during use.

Discover via ferrata with our combinations

KIT VIA FERRATA VERTIGO

KIT VIA FERRATA EASHOOK

Each kit contains a SCORPIO VERTIGO or SCORPIO EASHOOK lanyard, CORAX harness (size 1 or 2), and BOREO helmet (size M/L). Ready for adventure?

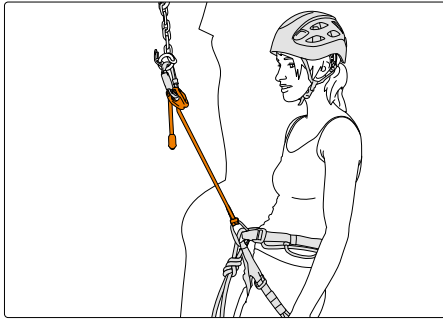

KIT

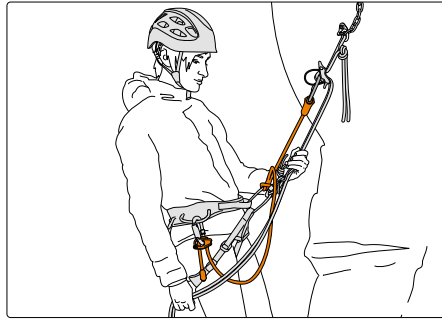

Lanyards for Climbing, Mountaineering, Caving, and Canyoning

Petzl offers many types of lanyards including single, double, asymmetrical, and adjustable.

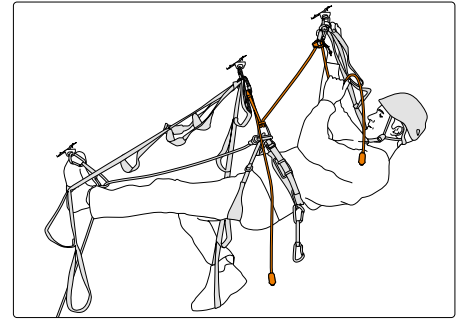

• Lanyards designed for different uses

The CONNECT ADJUST single lanyard allows the user to tether to the anchor when climbing or mountaineering in order to manage rope or gear, such as setting up a top rope or getting ready to belay.

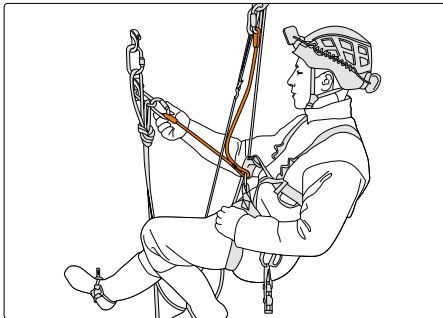

The DUAL CONNECT ADJUST double lanyard allows the user to tether to the anchor in order to set up a rappel system when multi-pitch climbing.

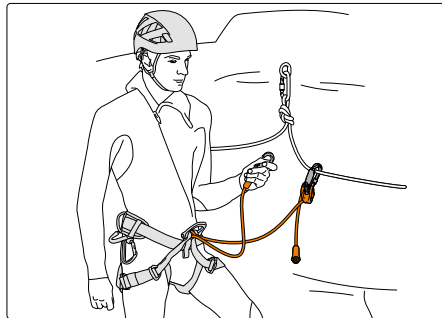

With two adjustable arms, the EVOLV ADJUST lanyard makes aid climbing progression easier.

• Length can be selected using the ADJUST rope adjuster

The DUAL CAVING double lanyard has multiple different uses when caving, such as tethering to an anchor, progressing along a traverse line, passing intermediate anchors, or ascending a rope.

The DUAL CANYON CLUB and DUAL CANYON GUIDE lanyards allow positioning at the anchor and progression along a lifeline when canyoning.

Lanyards equipped with the ADJUST rope adjuster allow for quick and precise length selection of the adjustable arm. This adjustment option allows optimal positioning when at the anchor.

Via ferrata lanyard with EASHOOK carabiners and swivel

The ideal lanyard for taking on breathtaking via ferratas. The SCORPIO EASHOOK SW is a lightweight, compact, and very comfortable lanyard. With an ultra-compact absorber and two elastic arms, you can move through the course with ease. An integrated swivel keeps the arms from tangling, keeping you comfortable as you move through the course. Designed for a wide range of hand sizes, the ergonomic EASHOOK carabiners provide optimal grip for easy handling when passing intermediate anchors. The lanyard is equipped with a short arm that allows you to install a carabiner (not included) so that you can easily rest on a rung on the via ferrata course.

Ultra-compact energy absorber reduces bulk for ease of movement.

Long extension capacity and elastic arms for easier progression and to adapt to different user heights.

- Lightweight, compact, and very comfortable lanyard:
 - Only 460 g
 - Ultra-compact energy absorber reduces bulk for ease of movement
 - Long extension capacity and elastic arms for easier progression and to adapt to different user heights
 - Short arm can be used to easily rest on a rung (carabiner not included)
 - Swivel keeps the arms from tangling during use and allows you to move through the course comfortably
- Ergonomic EASHOOK carabiners provide optimal grip and are easy to handle when passing intermediate anchors

- EASHOOK carabiners have an ergonomic shape that provides optimal grip designed for a wide range of hand sizes
- Automatic double-action locking system is easy to use, even when wearing gloves
- Large-opening carabiner for easily clipping and unclipping from cables
- Keylock system helps prevent the carabiner from snagging during use
- Easy equipment management for monitor and operator:
 - Lanyard designed for a wide range of users between 40 and 120 kg
 - Specific marking areas for easy identification
 - Identification panel on the lanyard to track the equipment throughout its lifespan

Product Specifications

- Lanyard length:
 - Retracted: 74 cm
 - Extended: 112 cm
 - Short arm (without carabiner): 26 cm
- Material(s): high-modulus polyethylene, polyester, aluminum
- Certification(s): CE EN 958, UIAA
- Comes with a storage pouch made from 100 % recycled polyester fabric

Lighting performance as defined by the ANSI/PLATO FL 1 protocol

Petzl has chosen to comply with the ANSI (American National Standards Institute) protocol to measure and demonstrate the lighting performance and burn times of our headlamps. This voluntary move allows users to easily compare the lighting performance and water resistance of different headlamp models using standardized criteria.

Lighting Performance: How Is It Measured?

- **Brightness (lumens)**

This measurement is taken between 30 and 120 seconds after the headlamp is turned on. It indicates the maximum light output, when the lamp is first turned on, using new batteries.

- **Lighting distance (meters)**

This is the maximum distance between the lamp and the location where only 0.25 lux of illumination remains. The measurement is taken when the lamp is turned on, using new batteries. Lighting distance depends directly on brightness, but mainly on the shape of the beam.

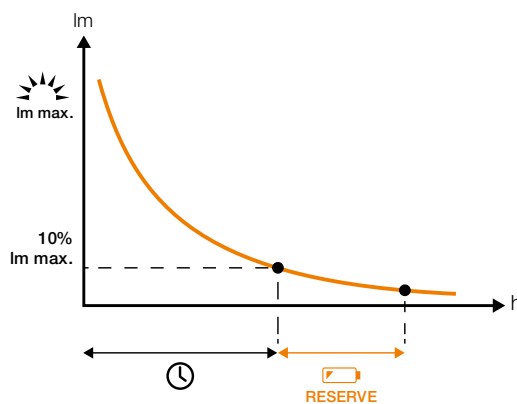

- **Burn time (hours)**

This corresponds to the length of time during which lighting is optimal. It is measured 30 seconds after the lamp is turned on and for as long as the lamp takes to drop to 10 % of maximum light output.

- **Reserve lighting (outside scope of ANSI/PLATO FL 1 protocol)**

In addition to these measures, Petzl offers reserve lighting. Reserve lighting provides minimum light level for walking. However, the light may not be sufficient for fast-paced activities (such as running, mountain biking, or skiing).

Example of a light output curve for a STANDARD LIGHTING headlamp.

Watertightness: What do the IP ratings on Petzl headlamps mean?

A headlamp's resistance to solids and/or liquids is indicated by its IP rating. This index classifies the level of protection offered by equipment against intrusions by solids (e.g. dust) and liquids (e.g. water, oil).

Rating complies with the majority of headlamp uses, in rain, snow, or humidity. All Petzl headlamps are at least IPX4 rated (weather resistant).

Rating indicates the headlamp is waterproof in up to 1 meter of fresh water for 30 minutes. The e+LITE headlamp is IPX7 rated.

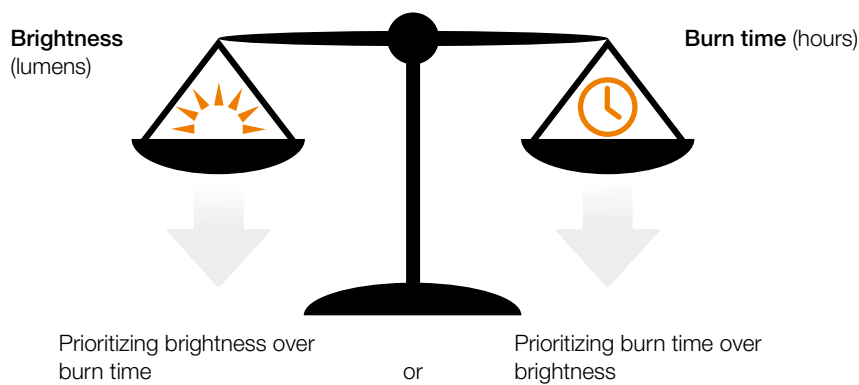

Rating indicates the headlamp is dustproof and waterproof in up to 1 meter of fresh water for 30 minutes. DUO RL, DUO S, ARIA 2 RGB and ARIA 1 RGB headlamps are rated IP67.

Optimizing Headlamp Performance With Different Lighting Levels

Petzl headlamps are designed to meet your needs for burn time and/or brightness. The choice is easy, with three brightness levels that correspond to the type of activity (except DUO headlamps):

- For a shorter activity requiring brightness, choose the MAX POWER level, which maximizes lumens over the first few hours
- For a longer activity requiring good burn time management, choose the STANDARD level, which offers a lumen/time balance
- For an activity requiring little movement (reading, camping), choose MAX BURN TIME, which optimizes battery life and provides moderate lighting for a longer time

Example of table that provides performance information on headlamp packaging:

		ANSI/PLATO FL 1			
					RESERVE
 STANDARD LIGHTING	MAX BURN TIME	7 lm	10 m	100 h	—
	STANDARD	100 lm	40 m	10 h	20 h*
	MAX POWER	350 lm	70 m	2 h	20 h*

*Reserve **0,25 lux - 4 m**

Petzl Technologies — A Step Ahead

Hybrid Headlamps: Choose the Power Source That Meets Your Needs

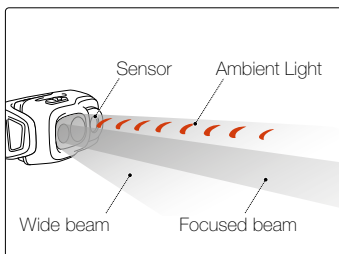

The HYBRID CONCEPT design allows Petzl's compact headlamps to run on either the CORE rechargeable battery or three AAA/LR03 batteries without an adapter.

- CORE rechargeable battery is an economical solution for frequent and/or intensive use
- AAA/LR03 batteries for occasional use with very long burn time

Available on IKO® CORE, IKO®, ACTIK® CORE, ACTIK®, ARIA 2 RGB, ARIA 1 RGB, TIKKA® CORE, TIKKA®, TIKKINA® and TIKKID® headlamps.

Beyond Power... Intelligence

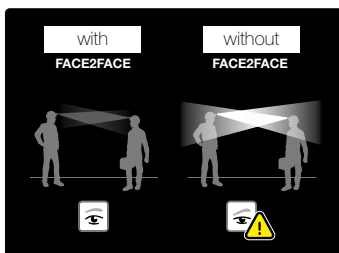

This exclusive technology developed by Petzl instantly provides the right lighting at the right time, without any need for manual operation. Burn time is optimized so you can remain focused on the activity. REACTIVE LIGHTING® technology provides:

- Intelligent lighting
- Hands-free lighting for greater convenience and performance
- Longer burn time

Available on DUO RL, NAO® RL, and SWIFT® RL headlamps.

Face-to-Face Without Blinding

Once activated, the FACE2FACE function triggers a sensor that detects other DUO headlamps within 8 meters and automatically dims the lighting whenever they face each other. The light returns to its original intensity once the other headlamp is no longer in its line of sight.

Available on DUO S headlamps.

Ergonomic and Comfortable AIRFIT® Headband

This water-repellent headband resists sweat and rain. The thin headband considerably reduces the area of contact and improves air circulation during dynamic activities.

Available on IKO® CORE and IKO® headlamps.

Brightness is the total quantity of light emitted by a lamp. It is expressed in lumens. The greater the quantity of light, the better you see. The value indicated is that of the most powerful lighting level.

Red and/or white strobe lighting allows you to signal and be more easily located, for example in an emergency.

Lighting distance is linked to brightness and beam shape. It is expressed in meters and indicates the range of usable lighting. The value indicated is the maximum value.

Rear red lighting on the rechargeable battery to signal your presence.

Burn time expresses the length of time a headlamp functions with power sufficient for carrying out an activity. It is expressed in hours. The value indicated is the maximum value.

Reflective components for night visibility.

Reserve lighting provides minimum light level for walking. However, the light may not be sufficient for fast-paced activities (such as running, mountain biking, or skiing).

LOCK function to avoid accidentally turning it on during transit or storage.

Wide beam designed for proximity lighting, to see up close or around your feet. The wide angle provides a very large and comfortable field of view.

Petzl headlamps that work with rechargeable batteries.

Mixed beam consists of a wide beam and a focused component, allowing both proximity lighting and longer-range vision for moving around.

Petzl headlamps that work with regular batteries (included).

Focused beam allows focused lighting on a target in order to see objects or people at a distance.

The IP rating on a headlamp indicates the degree to which it is waterproof and dustproof.

Red lighting for more comfortable night vision. This lighting allows good vision without blinding the user or members of a group.

The weight indicated is that of the headlamp with its energy source (regular or rechargeable batteries).

Red, green, and blue lighting allows the user to better see contrasts within the lit object in certain situations (useful when reading a map, hunting, or fishing).

The energy stored by the reflector surrounding an LED is released in the form of a phosphorescent glow. This glow allows a headlamp that is turned off to be found, even in the dark.

Rope Access and Confined Space

Rope access work often involves environments at significant height. Work done in confined spaces entails challenges related to the lack of space and lack of means of autonomous progression.

© 2021 - Petzl Distribution - Vuedici.org - TopShelf

Energy and Networks

These environments are characterized by structures such as towers, antennas, and wind turbines. The means of progression are varied and dependent directly on the structure, which does not always have a fall-arrest system in place.

Tree Care

Not all tree work can be done using exterior means such as elevated platforms or ladders. In this case, to move and work, arborists use rope progression techniques.

Framing and Roofing

At this type of work site, the risk of slipping and falling is higher. A fall-arrest system must therefore be installed to guard against these hazards.

Self-Rescue

Firefighters who find themselves trapped inside a burning structure must be prepared for self-evacuation and have the appropriate equipment on hand.

© 2019 - Petzl Distribution - Rémi Flament - SAS Michel Besson

Hazardous Areas

Where there is risk of explosion, the hazardous locations are classified by zone (ATEX and/or HAZLOC). All of the materials used must therefore conform with current regulations for this type of zone.

Technical Rescue

Every day, rescue workers must adapt to new and dangerous situations, and require significant material support. Petzl offers innovative, versatile, and high-performance solutions to facilitate these missions.

Maintenance and Workshops

Professionals working at concerts and shows, in workshops, in maintenance, or in the energy and networks sector all require practical and lightweight headlamps on a daily basis.

Tactical, Special Forces

Tactical operations in a hostile environment require maximum safety in every situation, so being able to count on the quality and performance of the equipment is essential.

Exploring New Horizons

The Petzl Foundation's mission is to support and initiate public interest projects through its activities in mountainous and vertical domains; projects that help bring balance to humankind's place in its natural, cultural, and economic environments. The foundation supports non-profit organizations through financial and equipment grants, as well as consultation and training.

New Winter Routes on the Geoportail for Safer Winter Hiking

© Stéphanie Lozac'hmeur

Having previously encouraged the distribution of slope maps, the Petzl Foundation and Skitourenuru.ch took it upon themselves to digitize the winter hiking routes in the Alps and make them available via the Géoportail website. By November 2023, 3,000 itineraries had already been published on the Geoportail, the IGN national land information portal.

outing in order to document the actual routes they took.

Some routes feature tricky sections where there is a risk of slipping dangerously (risk of impact or falling from a great height). An algorithm is used to identify these sections. They appear as a series of dots instead of a solid line. You can access this new collection of routes on the Géoportail by typing "rando hiver" in the search bar, and on most web or mobile mapping applications (Skitourenuru.ch, Yéti, lphigénie...).

If you believe a route or a tricky section is incorrect, you can flag it by emailing randohiver@fondation-petzl.org.

In partnership with: project supported by the Petzl Foundation, along with the IGN and Skitourenuru.ch.

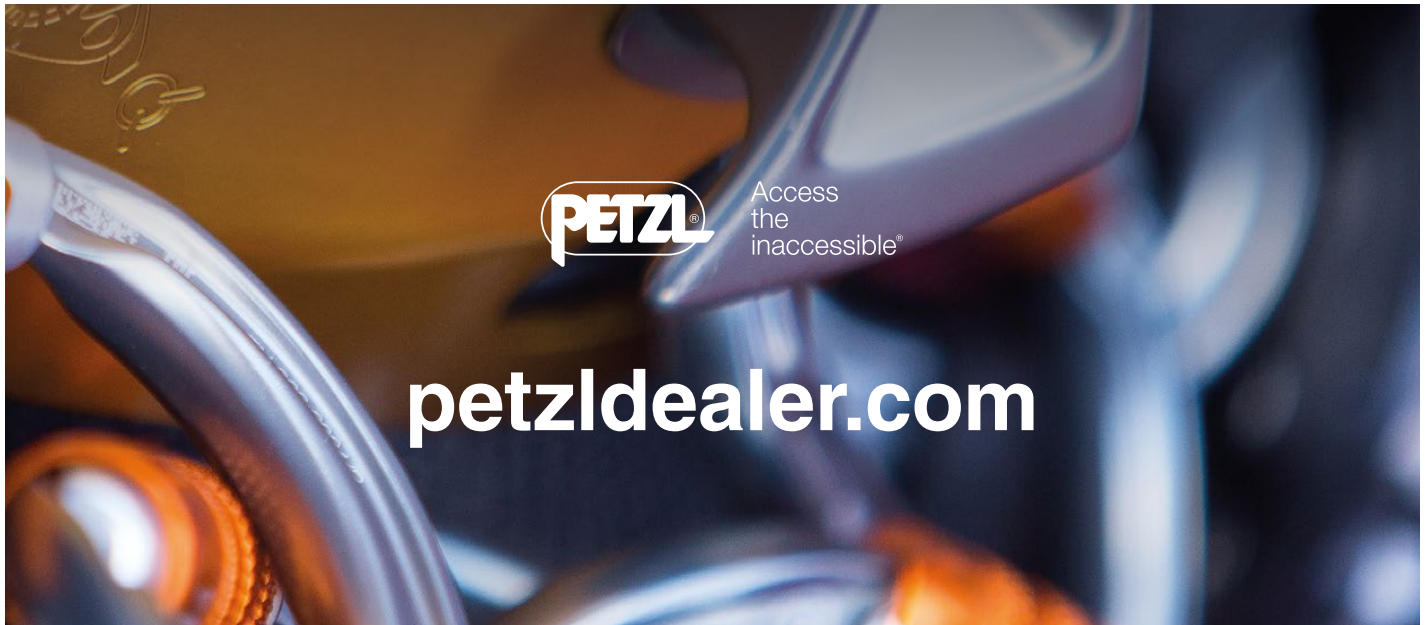

Country: France

Support: €140,000 since 2016

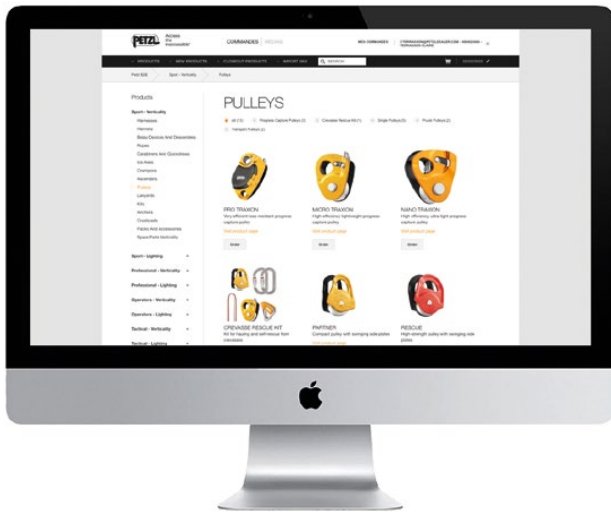

The new orange lines propose optimized routes in order to avoid avalanche-prone terrain.

Since autumn 2021, the Petzl Foundation and Skitourenuru.ch have been digitizing all the classic ski touring and snowshoeing routes in the French Alps. Nearly 4,000 routes have now been plotted using a type of mapping software known as a Geographic Information System (GIS). The idea is to plot the safest routes, avoiding terrain prone to avalanches wherever possible. The digitized map can display several layers of information, enabling the user to steer clear of the most hazardous areas. On a standard 1:25,000 IGN map, the system can overlay a slope map, an Avalanche Terrain Hazard Map (ATHM), a satellite photo of summer or winter conditions, and collections of GPS tracks logged by individuals during their

Order products and download information easily

Petzdealer.com, the Petzl retailer website

Easily access all of our offerings

- Navigate easily and intuitively
- Direct access to our latest products

Manage your products, down to the smallest details

- Comprehensive information on each product
- Documents to inform and advise your clients

Order with complete peace of mind

- Three direct access points to order your products
- Absolute pricing transparency
- Real-time status of Petzl inventories

Track your orders

- Precise status of your current orders
- Personalized order tracking

Download Information

Quickly find your choice of Petzl information for download.
